## POST MENOPAUSAL MAKEOVERS!

Hormones are the agents of youth. The natural decrease in hormones, as we age, can result in a loss of tissue elasticity and altered changes in body fat disposition.

This in turn, creates loose and flabby skin, increased fat around the trunk area of the body and stretched out muscles. Add previous pregnancies to the equation, these changes to the trunk area can be significant.

Exercises alone, usually are not enough to fix these problems and although liposuction can remove the fat, it can't correct the loose tone of the abdominal wall or skin. The tummy tuck takes care of the excess skin and the weakened abdominal wall. Dr. Lille believes the tummy tuck provides the ability to bring in the waist like a corset. Adding liposuction to the flank area can really help with the contour of the whole trunk. Call our office at **480 661-6197** to schedule a consultation with Dr. Lille.
