## Skin Deep

Want to wake up without having to put on makeup? Permanent cosmetics can enhance your appearance and make your morning routine a snap. Permanent cosmetics may be your answer for a natural look with eyeliner, perfectly shaped eyebrows and/or lip enhancement. To find out more information, call **480-363-7945** and ask for a complimentary consultation with Robin Pels, a board-certified trainer in the Society of Cosmetic Professionals.

## DR. SEAN LILLE CHOSEN AS PLASTIC SURGERY CONSULTANT FOR ABC NEWS

Channel 15 ABC News has selected Dr. Lille as their Plastic Surgery Consultant for their health programming. The producers at ABC News chose Dr. Lille after reviewing his impressive academic achievements and seeing the recent national media attention on his celebrity patients. The position involves communicating new advancements and technology in the field of plastic surgery to the state of Arizona. The ABC News crew not only showed up at Dr. Lille's office to film and interview a patient, but also filmed parts of the actual surgery in the operating room. The patient, from Fresno, California, underwent a mid-cheek facelift, a new advancement in facelift surgery. The segment was broadcasted in both Arizona and California during the month of February. Dr. Lille is one of the few plastic surgeons sought out when it is necessary to redo a surgery performed by another doctor, in many cases one who was not board-certified by the American Board of Plastic Surgery. The Channel 15 Newscast showed one of these patients, whose initial breast augmentation was done poorly by a doctor in Florida, and then how Dr. Lille had to successfully redo the breast.

In case you missed it, Dr. Lille also demonstrated the new "Cool-touch" ND-YAG laser on February 5, 2003 during ABC's evening news. The segment showed a patient undergoing the procedure on "live" television. The new laser is ideal for spider veins on the face and especially the legs. Previous lasers were frequently plagued with poor results. The new laser technology is more exact in targeting the structures of unsightly veins. With the addition of the cooling technology, potential skin damage to the non-affected area is also minimized. Although complications are minimal, healing from the procedure may take 2 to 3 months with patients potentially experiencing delayed bruising. Dr. Lille noted that although the "Cool-touch" laser has not replaced vein sclerotherapy in the legs, the procedure has significantly closed the gap with lower risk of complications.

## MINIMAL INCISION NECK LIFT — Back by Popular Demand

Many inquires were made regarding this procedure from our last newsletter. Patients have been exceptionally pleased with the dramatic results, as well as the fast recovery and minimal downtime. Most of all, it has provided a significant facial rejuvenation dimension in those patients with premature aging of the neck without evidence of facial jowling. By popular demand, a before and after photograph is included in the newsletter to demonstrate the significant results.
